

# 定制PM2镜像

Pm2 - 利用多核资源

```
# .dockerignore
node_modules
```

```
// process.yml
apps:
  - script : app.js
    instances: 2
    watch   : true
    env     :
      NODE_ENV: production
```

```
# Dockerfile
FROM keymetrics/pm2:latest-alpine
WORKDIR /usr/src/app
ADD . /usr/src/app
RUN npm config set registry https://registry.npm.taobao.org/ && \
    npm i
EXPOSE 3000
#pm2在docker中使用命令为pm2-docker
CMD ["pm2-runtime", "start", "process.yml"]
```

```
# 定制镜像
docker build -t mypm2 .

# 运行
docker run -p 3000:3000 -d mypm2
```
